

First idea (Sept. 2011)

Remarks:

- * testexec does not create snapshots
- * AUT fetch via wget. Then autoinstall
- * Jubula server/client on one machine
- * Jubula uses temporary DB
- * Jubula does not maintain test results
- * Jenkins copies workspace (test-results)
- * Jubula not installed on the Jenkins master

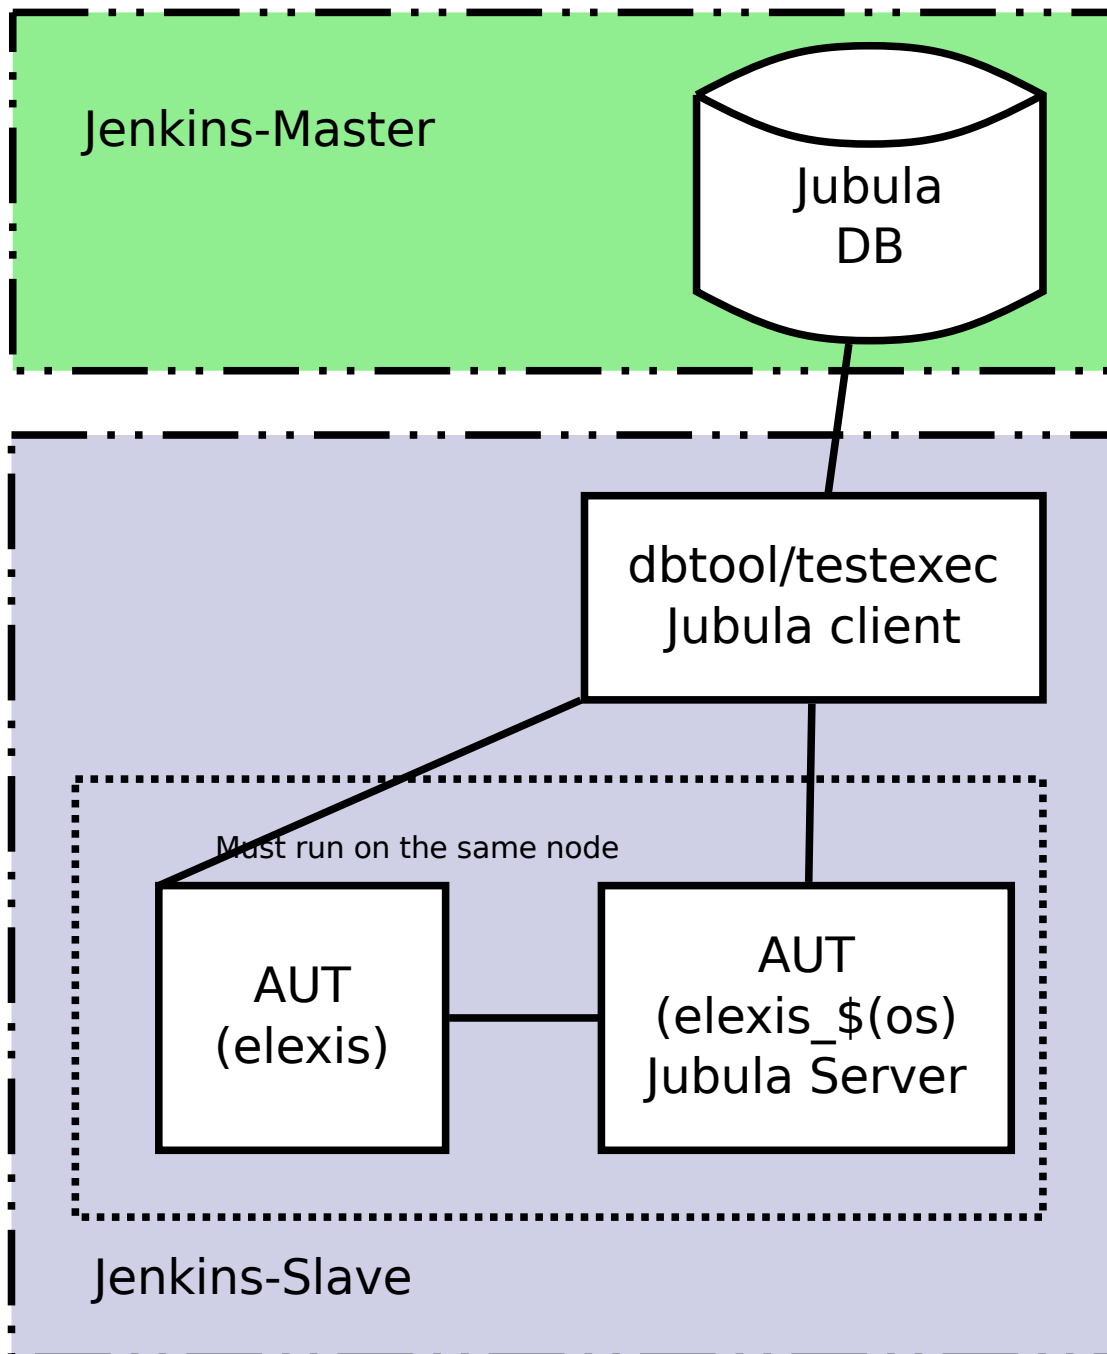

Second idea (Sept. 2011)

Remarks:

- * testexec should create snapshots (on JubulaServer=Jenkins Slave)
- * Jenkins Job must push AUT. Then autoinstall via ssh?
- * Jubula uses MySQL DB to maintain test results
- * Jenkins Job must copy from slave to workspace (test-results)
- * Jubula installed on the Jenkins master

Third idea (Sept. 2011)

Remarks:

- * testexeccreate snapshots (on JubulaServer=Jenkins Slave)
- * Jenkins Master manages slaved workspace
- * AUT fetch via wget, then autoinstall
- * Jubula uses MySQL DB to maintain test results
- * Jubula not installed on the Jenkins master
- * Jubula mysql-db must exist in Jubulas-Preferences
